

I am concerned that the expansion of Low Power FM (LPFM) will have a negative impact on radio stations using FM translators. I listen to K-LOVE, which is listener supported. This radio station brings a positive message to the negative airwaves that are predominant on FM stations. K-LOVE brings an uplifting and encouraging broadcast to the listeners in this area, that is why I support them. The approval of expanding LPFM stations has the potential to remove positive radio like K-LOVE from the airwaves and replacing it with more stations that would have a negative content. Your help in keeping K-LOVE on the air is appreciated.
